

Monsur Ahmed Chowdhury

Berlin, Germany · (+49) 17656990585 · chowdhury93.tuc@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Professional Summary

Automotive Software Test Engineer with 4+ years of experience in Python-based test automation, embedded software validation, and automotive infotainment/ADAS systems. Currently working on Mercedes-Benz projects at Luxoft/MBition, covering system testing, ECU flashing, diagnostics, vehicle validation, CI/CD automation, and Python test development. Hands-on with PyTest, Robot Framework, Jenkins, Docker, GitLab CI/CD, and REST API testing. Passionate about software quality, automation, and AI-assisted testing, with a growing focus on Generative AI, RAG, and agentic AI workflows using Claude.

Technical Skills

Programming	Python, Java, C++
Test Automation	PyTest, Robot Framework, Selenium, Postman, REST API testing
DevOps / CI/CD	Git, GitLab CI/CD, Jenkins, Docker
Automotive	CAN, Ethernet, DLT, AUTOSAR, ADAS, QNX, ECU Flashing, Diagnostics, Monaco, DLT Viewer
Web	Django, REST API, JavaScript, Streamlit
AI	Generative AI with LLMs and RAG; Agentic AI (Beginner, with Claude)
Cloud	AWS (Basic), Google Cloud (Basic)
IoT	Raspberry Pi, MQTT
Languages	English (Advanced), German (B1)

Professional Experience

Test Engineer · Luxoft GmbH / MBition (Mercedes-Benz Projects) · Berlin · June 2023 – Present

- Design and execute system-level test cases for Mercedes-Benz infotainment and ADAS platforms
- Execute regression, performance, stress, and vehicle validation testing across infotainment and ADAS platforms
- Perform ECU flashing on vehicles and hardware test benches
- Validate software builds before and after merge requests
- Analyze CAN, Ethernet, and DLT logs for issue investigation and root-cause analysis
- Develop Python-based automation frameworks for regression testing, reducing manual validation effort and improving test execution efficiency
- Build automation pipelines for flashing and result analysis using Jenkins, GitLab CI/CD, and Docker
- Collaborate with developers and stakeholders in Agile teams

Technologies: Python, PyTest, Jenkins, GitLab, Docker, Monaco, DLT Viewer, CAN, Ethernet, QNX, AUTOSAR, ADAS

Software Developer · Livello Technologies · Düsseldorf · April 2022 – May 2023

- Developed Python-based software for Edge IoT applications
- Designed an automated testing framework with PyTest and automated software testing
- Containerized applications and the testing environment with Docker
- Supported CI/CD pipelines and continuous deployment
- Verified bug fixes and software releases

- Produced verification reports and quality metrics

Working Student and Internship · Python Software Development and Test Automation

- Developed a payment system for smart kiosks
- Implemented MQTT integration and communication, and supported the network agent
- Wrote unit tests and automated tests in Python

Certifications & Projects

- Robot Framework & Selenium with Python
- Agile & Scrum Project Management
- Generative AI / RAG
- Agentic AI (Beginner, with Claude)
- Master's Thesis: Edge IoT Software Testing for Smart Kiosk Solutions

Education

Master's in Automotive Software Engineering · Technical University of Chemnitz, Germany · 2019 – 2023

Thesis: Edge IoT Software Testing for Smart Kiosk Solutions

Bachelor's in Electrical and Electronic Engineering · American International University Bangladesh, Dhaka · 2011 – 2015
